Professional Summary

Senior Backend Software Engineer with 5+ years of experience designing and building scalable distributed systems, event-driven microservices, and enterprise backend applications using Java, Scala, Spring Boot, and Python. Experienced in architecting high-performance REST APIs, asynchronous messaging systems, and resilient microservices leveraging Kafka, Redis, MongoDB, Elasticsearch, and Docker. Hands-on experience with cloud-native development, AI/LLM integration, performance optimization, and secure application design. Passionate about solving large-scale engineering challenges through clean architecture, scalable system design, and automation.

Technical Skills

- Languages : Java, Scala, Typescript, SQL
- Frameworks: Spring Boot, Akka HTTP, Play Framework, React
- Databases : MySQL, MongoDB, Redis, Elasticsearch
- DevOPS & Tools : Docker, Kafka, Git, Redis, ElasticSearch
- Cloud & AI: AWS, LLMs ,Prompt Engineering, LangChain, Agentic AI, GenAI

Work Experience

- **Bank Of America** Feb 2026 – Present
Bengaluru, India
Senior Software Engineer
 - Designed and developed backend services for intraday position processing and financial trade workflows using Java and Spring Boot.
 - Built scalable REST APIs and service integrations supporting multi-region client onboarding and enterprise trading applications.
 - Optimized backend processing pipelines, improving latency and throughput for real-time position updates.
 - Implemented resilient processing using validation frameworks, retry mechanisms, exception handling, and production monitoring.
 - Collaborated with solution architects, QA, and business teams to deliver highly available backend services across multiple regional deployments.
 - Performed production support, root cause analysis, and performance tuning for mission-critical financial systems.
- **Indium Software / Avetta** Jan 2025 – Feb 2026
Bengaluru, India
Software Engineer L2
 - Designed and built a self-service configuration platform using Scala, Akka HTTP, MongoDB, and Spring Boot microservices, automating supplier onboarding workflows.
 - Architected configurable JSON-driven onboarding APIs supporting dynamic validation rules and reducing configuration errors by over 80%.
 - Designed event-driven backend services using Kafka for asynchronous processing of high-volume supplier onboarding requests.
 - Integrated AI-powered validation workflows and LLM-driven remediation suggestions using prompt engineering to improve operational efficiency.
 - Built secure authentication and authorization workflows using Spring Security, MFA, OTP (Twilio), and role-based access control.
 - Implemented retry mechanisms, distributed caching, fault tolerance, and resilient microservice communication to improve platform reliability.
 - Optimized backend performance through asynchronous execution, caching strategies, and database query optimization.

• YuppTV Digital India
Junior Software Engineer

May 2024 – Dec 2024
Hyderabad, India

- Designed scalable OTT content ingestion services using Scala, Akka HTTP, and microservices architecture supporting live and video-on-demand streaming.
- Built RESTful integrations for premium partners including SonyLiv and News9Plus, enabling automated content onboarding and metadata synchronization.
- Developed metadata classification and filtering pipelines improving content discoverability and recommendation accuracy.
- Enhanced search performance using Elasticsearch indexing and Redis caching to deliver low-latency search experiences.
- Migrated legacy ingestion workflows to scalable microservices while ensuring zero production downtime.

• LTIMindtree
Software Engineer

Mar 2022 – May 2024
Bengaluru, India

- Enhanced enterprise monitoring platform by extending Hyperic capabilities for ADR, DCFC, automated incident creation, and infrastructure monitoring.
- Designed scalable DHCP monitoring services to proactively detect IPv4/IPv6 exhaustion and automatically generate incident tickets.
- Improved reliability of enterprise notification services by resolving background processing failures and optimizing alert delivery.
- Developed enhancements for customized Artemis ActiveMQ plugins supporting scheduling, monitoring, and execution of enterprise background jobs.
- Strengthened enterprise application security by identifying vulnerabilities and implementing secure coding improvements.

Education

Lovely Professional University
Bachelor of Technology

2017 – 2021

- **Microservices Banking Application:** Designed and developed a Spring Boot–based banking platform with OAuth2 security, role-based access control, CSRF protection, Dockerized deployments, RabbitMQ-based asynchronous messaging, Eureka service discovery, centralized configuration, and Prometheus–Grafana monitoring for system observability.

Certifications

- LLM Engineering: Master AI, LLM & Agents (2025)
- NLP – Natural Language Processing with Python (2025)
- Microservices with Spring Boot, Docker & Kubernetes (2023)
- Scala & Functional Programming Essentials (2022)
